ABOUT

Petroleum ATS Division, known as Petro ATS is a world leading manufacturer of engineered products, systems and services for the optimization of industrial process. Our solutions include turnkey engineering, control systems, measurement products, life cycle services, and industry specific products such as electric propulsion for ships, mine hoists, turbo-chargers and pulp testing equipment.

The cutting edge technology and the most dedicated engineering team has taken Petro ATS to be a leader company in the world wide oil industry market.

Our vision is to impulse the growing process industries such as oil and gas, petrochemicals, mining, metal production, and marine application, in order to optimize the results for improving the productivity on the field.

Petro ATS is taking responsibility on building the future of the process industry, having the most prepared team leading the growth of the company along the most advanced technologies and energy solutions for the next generations. Our biggest commitment is working on the safest, most reliable and cost-efficient innovations in the industrial process market.

INTEGRATED VFD SYSTEM

PRODUCT OVERVIEW

ORION200

A variable-frequency drive (VFD) is a type of adjustable-speed drive used in electro-mechanical drive systems to control AC motor speed and torque by varying motor input frequency and voltage.

ORION200 has successfully solved many of critical extraction and production situations and optimized well performance.

The ORION200 is an adjustable frequency AC drive that achieves the ultimate in AC motor control performance. The second generation of AC drives to utilize ABB's Direct Torque Control (DTC) motor control algorithm, the ORION200 performs accurate speed and torque control without the use of a pulse encoder or other speed measurement device on standard squirrel cage induction AC motors.

The ORION200 can be used from the simplest to the most advanced applications without complicated configuration changes. Three integral option slots support additional analog and digital I/O, encoder feedback, and various fieldbus communication option modules. An integral brake chopper is standard in all R2 and R3 frame drives and is available as an option in frames R4 through R8.

The ORION200 with PCP&ESP software can work without any external inputs or with down-hole, surface and pump sensors. It will protect the Pump by accurately controlling the rod speed and torque at all times.

It includes several process control functions for the protection of the pump equipment and the optimization of production rates. Protection is provided by monitoring selectable input signals and automatically shutting down the pump during conditions that could harm the equipment. Optimization is realized through automatic pump speed adjustments based upon control set points and limits. Speed reference for the pump by motor or pump rotation speed. Can be used both engineering units- English and Metric.

ORION200 Control Panel

The ORION200 Control Panel gives access to the user to control the drive from the exterior without opening the cabinet.

Features:

Temperature Control Solutions for Electrical Enclosures

Cooling Capacities of 1000 to 20,000 BTUH
Indoor/Outdoor, NEMA Types 12, 4 & 4X.

Engineered & manufactured to endure the most difficult of environments and applications. Thermal Edge air conditioners will exceed environmental requirements in applications like Steel, Food Processing, Petro-Chemical, Cement, Paper & Pulp and Plastics.

Digital Temperature Controller

Active Condensate Management System

Complete elimination of condensate
Eradicates condensate without corrosive contact with coils

Unit Efficiency

Pressure operated blower control reduces power inrush and saves energy
Highly efficient rotary compressor
Fully insulated & sealed cabinet
Temperature Control Valve to provide a broad temperature range while maintaining cooling capacity.

MANUFACTURING EXECUTION SYSTEMS

MES

A Business Intelligence **Manufacturing Execution Systems** (MES by Petroleum ATS Division) solution comprises of a computerized system and software modules used in manufacturing and production environments that can provide the right information at the right time. An MES solution will provide real-time visualization of performance metrics to ensure maximum productivity, quality and up-time.

Visualization: Present and Future

Data visualization is a way to see your process in real-time. This includes how people, systems, assets and inventories travel through the supply chain. The ability to view this overview or "Dashboard" on your web enabled device makes it much easier to manage multiple factories/locations and increase overall efficiency. The visualization layer provides the following features and benefits:

The system allows to monitor process critical information which can be accessed via any smartphones or tablets, Wi-Fi access will allow control of the system through credential identification.

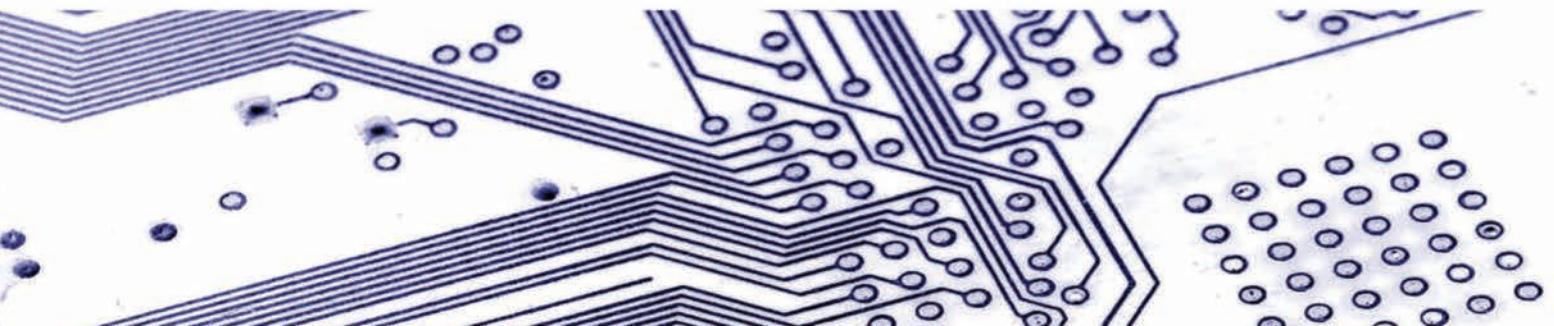

Reporting functions can be easily developed for future project stages. These can be created in PDF format, exported to Excel, or just viewed on a screen.

Connected and credentialed computers on the network can be allowed to view the system(s). No additional licenses are required.

No special software needs to be installed on any client computer. A modern browser is pointed at the server, and the screens download and run automatically. This reduces the burden on the IT department!

Notification Services can notify selected personnel immediately when any critical business processes are approaching a configured set-point. At this time, actions can be made before problems emerge, thus avoiding risk events.

The following are examples of Dashboard screens. The Dashboards are 100% customizable and expandable for future functionality.

WHY TO USE ORION200?

OUR ADVANTAGES

- Manufacturing Execution Systems (MES), allow the ORION200 VFD to be able to be connected to the network and provide real-time values anywhere with simple access to the application on your phone or laptop.
- ORION200 VFD has higher performance (up to 316 HP if required) giving greater reliability and efficiency in critical moments of production.
- Sinusoidal output filter with application to PCP and electric submersible. It was found that the output signal by oscilloscope is clean without noise, prolonging engine life and prevents future damages.
- Input and output control panel, for input and output power of the VFD and motor. This achieves avoid direct contact with the signals and controls the VFD by external agents at the time of connection and disconnection.
- External control panel that allows the operation of the VFD externally without access to external enclosure which exposes service personnel to high voltage parts and electrification risk or shut down of the well.
- Maple Systems Data logger for display of the data externally and keep track of the data on a portable memory to be later revised by production.
- 20,000 BTUH cooling system to maintain and prolong the life of electronic equipment of the main cabinet (VFD suppressors, ...)
- Digital temperature controller. Allows to program a set point for cooling the system and indicates the VFD until, when it can be operated as in cases of failure to prevent the loss of the well completely.
- Prevention System condensates. Avoid creating condensates which can create corrosion on internal teams.
- Unit efficiency reduces airflow and reduces energy consumption
- The cabinet is mounted on a reinforced skid with both filters and connection boxes, to provide an easier time handling and maneuverability for transportation..
- Intruder detection system in the cabinet and junction boxes. This system triggers an alarm when unauthorized personnel to open the doors of the cabinet or junction box or out of power cables. This alarm can be triggered in the control room or in the same job site adding a siren in it.

DRY-TYPE TRANSFORMER

1. General

1.1 Main Feature

- Dry-type transformer mainly consists of core and windings, it doesn't immerse in insulating liquid. Our dry-type transformer designs according to IEC.
- With no leakage of oil and gas , security, environmental protection, and low-noise performances.

1.2 Application

- Mainly used for locations having special fire safety requirements such as commercial buildings,high-rise buildings,airports, industrial and mining enterprises, power plants, oil platforms, subways and tunnel.
- Applicable for 50/60Hz system.

1.3 Working Condition

- Max.ambient temperature: +40°C
- Max.daily average ambient temperature : +30°C
- Max.annual average ambient temperature: +20°C
Min. temperature: -5°C (indoor installation)
- Min. temperature: -30°C (outdoor installation)
Altitude: ≤1000m
- Relative humidity: ≤93%, no dews on the winding surface.
- Customized products are available.

1.4 Standard

- IEC 60076-11:2004; ANSI, etc.

SC(B) Epoxy Resin Cast Dry-type Transformer

Type Designation

S C (B) □ - □/□

- Rated voltage (kV)
- Rated power (kVA)
- Design code
- Foil winding
- Resin cast
- Three-phase

SG(B) H-class Impregnated Insulated Dry-type Transformer

Type Designation

S G (B) □ - □/□

- Rated voltage (kV)
- Rated power (kVA)
- Design code
- Foil winding
- Dry-type, natural air cooling
- Three-phase

SCBH15 Amorphous Alloy Core Dry-type Transformer

Type Designation

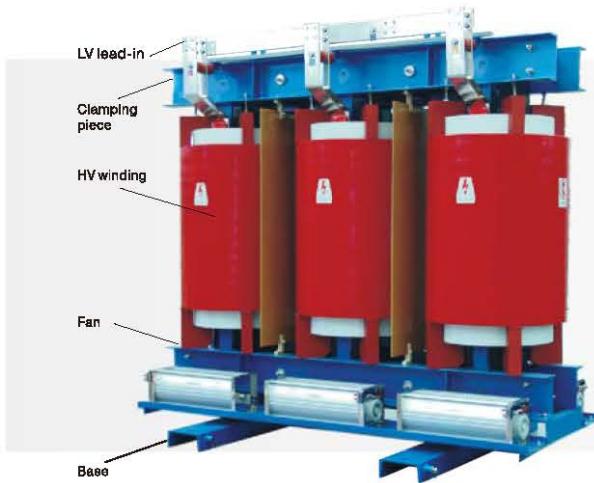

S C B H 15 - □ / □

- Rated voltage (kV)
- Rated power (kVA)
- Loss level code
- Amorphous alloy core
- Foil winding
- Forming solid (Casting)
- Three-phase

2. Technical Feature

- 2.1 Transformer technology is based on model experiments, self-developed calculation software of leakage flux, short circuit mechanical strength, on load losses etc, to realize overall optimization of electrical performance of transformer, therefore low-cost and high-performed solutions could be provided to the customers.
- 2.2 The structure design is based on three-dimension finite element analysis software ,to do analysis on transformer iron core and clamping pieces,which provides a guarantee to enhance mechanical strength,anti-short-circuit capacity and reduce noise.

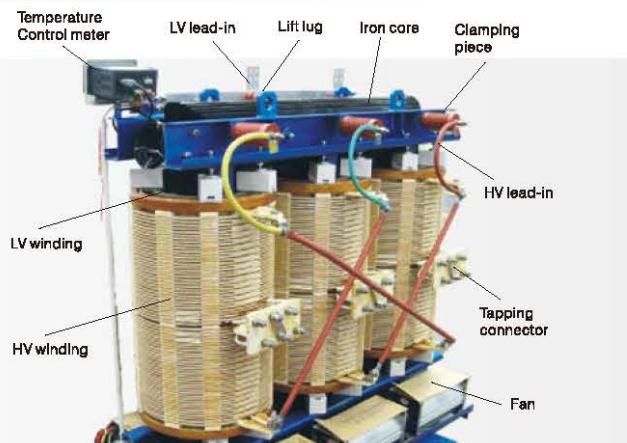

Performance Feature

- Lower temperature rise, long thermal life.
- Fire-retardant, long time burning under 800°C high temperature without smoke generation.
- Strong thermal shock resistance ,at -50°C can immediately increase full load.
- High humidity-resistant performance.
- Low loss, a significant energy saving effect.
- Easy recycling on insulating material and copper at life end for environmental protection.
- Temperature control meter.

Performance Feature

- Safety, fireproofing, non-polluting, direct operation on the load center.
- Strong mechanical strength, excellent insulation capacity, low partial discharge ,strong radiation capability, high reliability and long life.
- Low loss, low noise, energy-saving.
- High heat dispersion and strong serviceability ,forced air cooling can improve the operation of capacity.
- High humidity-resistant, environmental protection, fire-retardant, explosion-proof, less maintenance compact design and light weight.

Performance Feature

- Safe, reliable, no pollution, can operate directly in the load center;
- High mechanical strength, strong ability to withstand short circuit, low partial discharge, good thermal stability, high reliability, long use life;
- Low no-load loss, high performance, low noise, efficient energy conservation;
- High thermal performance, high operation capacity, when forced air cooling the capacity can be improved to run;
- Good moisture resistant ability, can operate in high humidity and other harsh environments;
- With features of environmental protection, flame retardant, explosion-proof and free of maintenance;
- Small size, light weight;

DRY-TYPE TRANSFORMER

3. Structure Feature

3.1 Iron Core

The iron core is made of high quality, cold-rolled, granule-oriented silicon-steel sheets and machined with completely automatic cutting line, superposed with 45° six-level bias seams. Core column adopts special banding technique, the surface of iron core is painted with the special rustproof coating to resist humidity and rust, which can effectively reduce the no-load losses, no-load current and iron-core noise. Facilitated with six sets of cutting lines for iron core such as, Soenen from Belgium.

▲ Silicon steel sheet
▼ Core cutting line (transverse)

▲ Cutting line (Slitting)

▲ ③ Automatically stacked silicon steel sheets ▲ ② Silicon steel sheet cutting

▲ ① Sending materials

▲ The silicon steel sheet folded

▲ Iron core overlapping

▲ Amorphous alloy core corss sectiong

▲ Fixation

DRY-TYPE TRANSFORMER

3.2 Winding

F-class insulation HV winding: it is made of lacquered wire. With hardness ranges from 120 to 210 Mpa. The insulation material is a composite of silicon micro-powder and epoxy resin, featuring high performances of good thermal shock resistance, fire resistance, no emission of hazardous gases, good heat dispersion and low winding temperature rise.

▲ F-class insulation HV winding

► Epoxy resin composite material

▲ Vacuum casting, drying workshop

▲ HV F-class insulation windings before casting

▲ Vacuum casting equipment from Germany HÜBERS adopts patented technology such as film defoaming and static mixer, ensure the transformer low partial discharge .

▲ Vacuum dry oven

- H-class insulation HV winding: it adopts NOMEX paper wrapped flat copper wire and continuous winding process. The winding made after dry treatment by VPI vacuum pressure device, several times impregnated in special H class insulating paint, and baking features high mechanical strength, good heat dispersion.

▲ Vacuum Impregnation device

▲ HV H-class Insulation winding

- LV winding: LV winding is mainly made of foils. It adopts interior argon gas protection welding, with high precision and reliability as no external welding joint. It solves the winding turns imbalance, effectively improves thermal performance and enhance short circuit withstanding capability.

▲ LV foil winding

▲ TUBOLY LV foil winding machine from Switzerland which with constant tension, deburring, automatic bypass system and the corrective function

DRY-TYPE TRANSFORMER

4. Component

4.1 Protection Enclosure

Protection enclosure can be made of general steel plate, stainless steel plate or aluminum alloy materials. For example, protection enclosure of IP20 can prevent solid object which is 12mm from entering, and this type is suitable for indoor installation. Protection enclosure of IP28 inherits the functions of IP20 enclosure and can prevent water dropping at an angle within 60° to the vertical line from inflooding, as well which is adapted to outdoor installation.

Enclosure of steel plate

Enclosure of stainless steel plate

Enclosure of aluminum alloy plate

4.2 Temperature Control Device

Transformer temperature control device adopts double-sensor principle of PTC nonlinearity resistance and PT100 linearity resistance. It has functions of LED temperature display/temperature setting. It can keep highest temperature data, automatically alarm and trip signal and start/stop the fan either automatically or manually. Various special temperature devices can be equipped according to the demand of the customer.

4.3 Air Cooling System

Usually, the cooling system of transformer is natural air cooling(AN), then the transformer can continuously operate at rated power. Cooling system can be provided according to customers' requirements. The fan is controlled automatically by the temperature controller to ensure the normal temperature rise when the load exceeds the rated load.

Cross-flow cooling fan

5. Quality Management, Product Certificate, After-sales Service

5.1 Quality Management

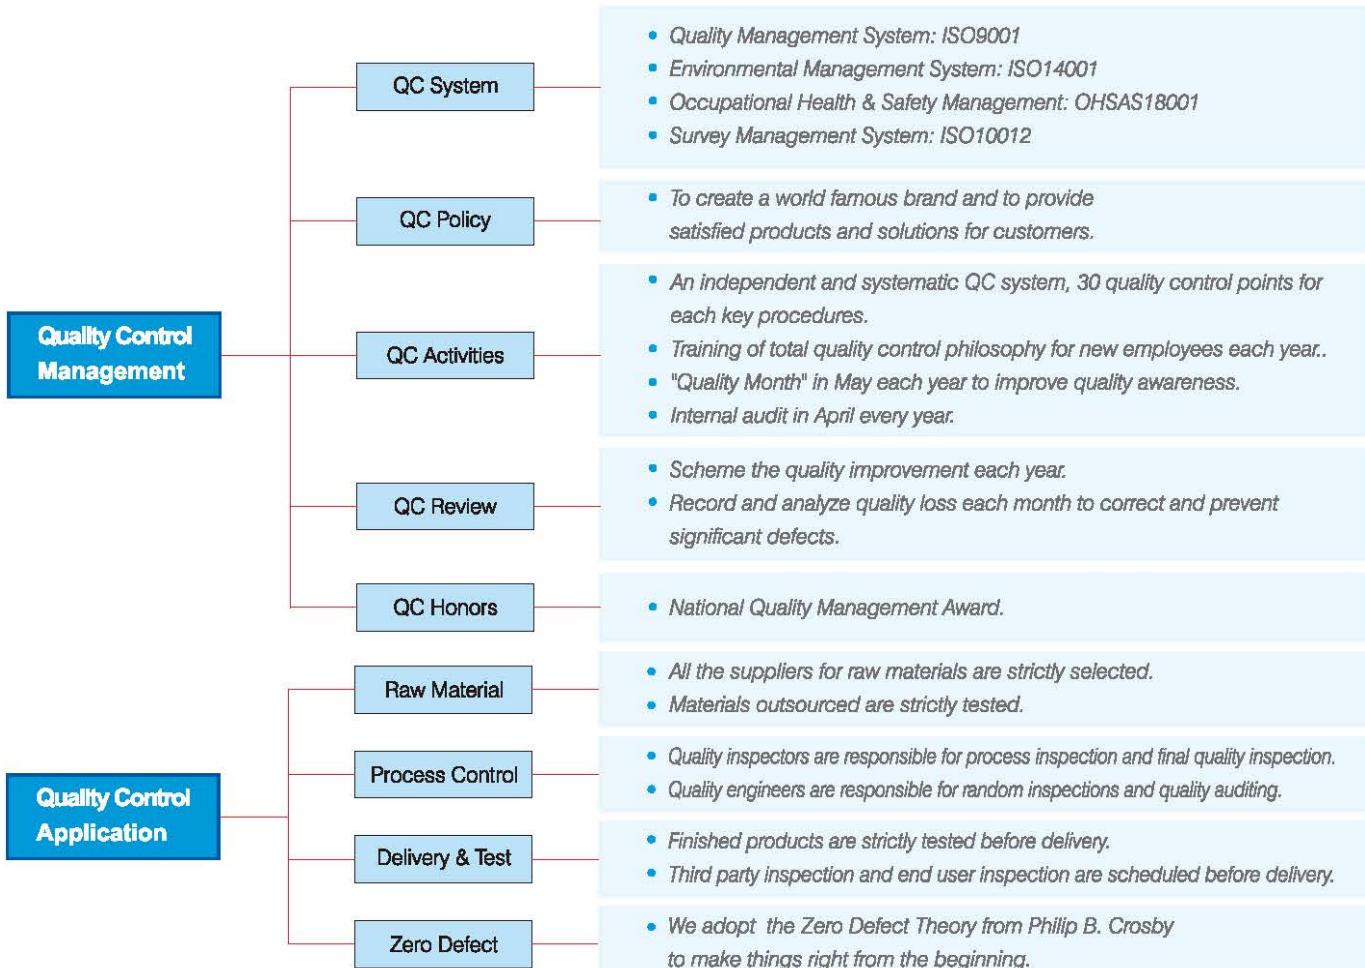

▲ Testing control room

▲ Lightning impulse generator

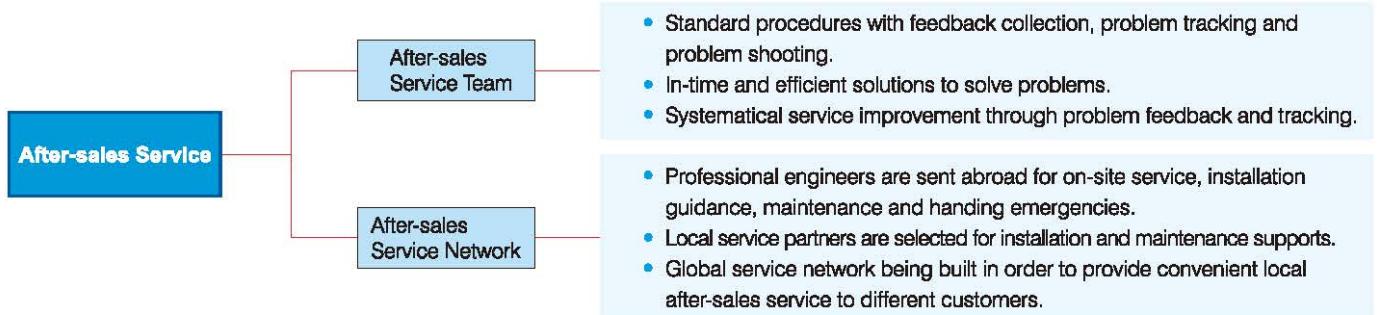

▲ Partial discharge test

▲ Power frequency voltage test

DRY-TYPE TRANSFORMER

5.2 After-sales Service

6. Customer-oriented Support System

Professional & Fast customer support system was set up to ensure customer satisfaction.

7. Main Technical Parameter

7.1 Epoxy Resin Cast Dry-type Transformer

※Note:Customized and more-efficient dry-type transformer is available on your requirements.

7.3 Amorphous Alloy Core Dry-type Transformer

7.3.1 General

Application: applicable for all places where common dry-type transformers are used, such as high-rise buildings, commercial centers, airports, oil platforms, subways, tunnels, airports, railway stations, industrial and mining enterprises and power plants. It is especially suitable for places which are flammable and explosive.

7.3.2 Standard

IEC 60076-11:2004 Dry type power transformer

7.3.3 Main Technical Parameter

Note: (1) The values of load loss (W) listed in the sheet 9 are under particular temperature levels corresponding with specific insulated heat-resistant levels listed in the parentheses.

(2) If user adopts other connection symbols, the specific technical requirements are negotiable between the manufacturer and the user.

DRY-TYPE TRANSFORMER

8. Overall and Installation Dimension

8.1 Epoxy Resin Cast Dry-type Transformer

Note: The width(dimension E) of the bus bar of the connection terminals in the LV neutral point is equivalent to the width of the bus bar of the connection terminals in LV a/b/c phase.

8.1.1 Dimension of Transformer Body of SC(B)9 Series, 10kV (unit: mm)

Note: (1) Customized products are available.

8.3 Amorphous Alloy Core Dry-type Transformer

Customized products are available.

9. Ordering Information

Please indicate the following technical parameters when ordering:

Product type, rated capacity, voltage ratio and tap, connection way, impedance voltage, no-load loss, on-load loss, insulation class, rated frequency, insulation level, environment temperature, altitude, standard, air cooling system, temperature control system, protection degree of the enclosure, color of the enclosure and other particular requirements.*
